9.  $L.s.f. = \frac{18}{24} = \frac{3}{4}$

$A.s.f. = \frac{9}{16}$

$v.s.f. = \frac{27}{64}$

$\frac{h}{3.2} = \frac{3}{4} \Rightarrow 4h = 3h + (3 \times 3.2)$

$h = 9.6$

(i) surface area of small cone:

$L = \sqrt{9^2 + 9.6^2} = 13.16 m$

$S.A = (3.142 \times 9 \times 13.6) = 384.581$

Curved area of frustrum

$$= \frac{7 \times 3.142 \times 9 \times 13.16}{1 \times 9}$$

$$= 289.4$$

$$\text{Top area} = (3.142 \times 9^2) = 254.5\text{cm}$$

$$\therefore \text{Total area} = 543.9\text{m}^2$$

$$(ii) \text{Volume of smaller cone} = \frac{3.142 \times 9^2 \times 9.6}{3}$$

$$= 814.41$$

$$\text{Volume of frustrum} = \frac{(37 \times 814.41)}{27}$$

$$= 1116.043\text{m}^3$$

$$= 1116043\text{L}$$

$$\text{Litres used per day} = (15 \times 15 \times 40) + (116 \times 65) = 16540\text{L}$$

$$\text{No. of days} = \frac{1116043}{16540} = 67.5\text{days}$$

$$10. \quad L.S.F = \frac{3}{2} = \frac{28 + h}{h}$$

$$56 + 2h = 3h$$

$$h = 56\text{cm}$$

$$\text{Volume} = \frac{1}{3} r^2 H - \frac{1}{3} r^2 h$$

$$= \frac{1}{3} \times 22^2 \times 15 - \frac{1}{3} \times 10^2 \times 28$$

$$= 13200 - 2933\frac{1}{3}$$

$$= 10.2667\text{litres}$$

$$(b) \text{Slant height} = 152 + 562 = 3361$$

$$= 57.97\text{cm}$$

$$\text{Curved surface} = RL - rl$$

$$11. \quad 2.6 \times 4.8 \times 3.2 = 39.936\text{m}^3$$

$$1\text{m}^3 = 1000\text{litres}$$

$$39.936\text{m}^3 = 39.936 \times 1000$$

$$= 39936 \text{ litres}$$

12. The top surface of the frustrum is  $\frac{2}{3}$  way up the vertical height of the original one.

$$\Rightarrow VX:XY = 1/3h: h = 1:3$$

Using similar triangle we have

$$\frac{R}{R} = \frac{VX}{VY} = \frac{1}{3}$$

$$R:R = 1:3$$

$$\frac{r}{R} = \frac{1}{3} \Rightarrow R = 3r$$

$$R = 3 \times 7 = 21\text{cm}$$

(c) height of removed cone is  $\frac{1}{3}$  height of original cone

$$h = \frac{1}{3} \times 45 = 15\text{cm}$$

$$\text{volume of removed cone} = \frac{1}{3} r^2 h$$

$$= \frac{1}{3} \times 7^2 \times 15$$

$$= 770\text{cm}^3$$

$$\text{Now L. S. F} = \frac{1}{3}$$

$$\text{V. S. F} = \left(\frac{1}{3}\right)^3 = \frac{1}{27}$$

$$\text{Hence ratio of volumes} = 1:27$$

$$\begin{aligned} \text{Volume of original cone} &= 27x \text{ Vol. of small cone} \\ &= 770 \times 27 = 20790 \text{cm}^3 \end{aligned}$$
