1. **Angles and Plane Figures**

1. The sum of angles of a triangle is given by the expression \((2a+b)^0\) while that of a quadrilateral is given by \((13a - b)^0\). Calculate the values of \(a\) and \(b\) \((4\ mks)\)

2. The figure below represents a quadrilateral ABCD. Triangle ABX is an equilateral triangle. If \(\angle ADX = 50^0\), find \(\angle AXD\) with \(\angle BAD = 90^0\) \((2\ mks)\)

![Diagram of quadrilateral ABCD]

3. Wanjiku is standing at a point P, 160m south of a hill H on a level ground. From point P she observes the angle of elevation of the top of the hill to be 67\(^0\)

   (a) Calculate the height of the hill \((3\ mks)\)

   (b) After walking 420m due east to the point Q, Wanjiku proceeds to point R due east of Q, where the angle of elevation of the top of the hill is 35\(^0\). Calculate the angle of elevation of the top of the hill from Q \((3\ mks)\)

   (c) Calculate the distance from P to R \((4\ mks)\)

4. In the triangle XYZ below, find the angle ZXY. \((3\ mks)\)

![Diagram of triangle XYZ]

5. The exterior angle of a regular polygon is equal to one-third of the interior angle. Calculate the number of sides of the polygon and give its name. \((4\ mks)\)

6. In the figure below, lines AB and LM are parallel.

   ![Diagram of parallel lines AB and LM]
Find the values of the angles marked x, y and z  

7. From points A and B on a level ground the angles of elevation to the top of the building are $24^0$ and $38^0$ respectively. If the distance between A and B is 47m and that of B from the foot of the building is X;
   (a) Form an expression for the height of the building
   (b) Calculate the height of the building
   (c) Find the difference in the distance between the top of the building and points A and B

8. The angle of elevation of the top of the tower from the foot of a building is $63.51^0$. The angle of depression of the top of the building from the op of the tower is $18.43^0$. The building and the tower are 30m apart. Find
   a) The height of the tower  
   b) The height of the building

9. The exterior angle of a regular polygon is an eighth of the interior angle. How many sides does the regular polygon have?  

10. The sides of a parallelogram are 4cm by 5cm and its area is $12cm^2$. Calculate its angles.  

11. From a point 20m away on a level ground the angle of elevation to the lower window line is $27^0$ and the angle of elevation to the top line of the window is $32^0$. Calculate the height of the window.

12. A regular polygon has its exterior angle $18^0$, and one of its sides 16cm. Calculate its area. 
   (to 2 d.p)  

13. The angle of depression of a point A on the ground from the top of a post is $18^0$ and that of another point B on the same line as A nearer to the foot of the post is $25^0$. If A and B are 70m apart,
   (a) Draw a sketch to represent positions of A and B.  
   (b) Using your sketch calculate
   (i) The height of the post from the ground level (Ans 1 d.p)  
   (ii) The distance of point A from the foot of the post.  

14. The figure below shows an irregular polygon PQRSTUVW. 
   Calculate the sum of all the interior angles in the figure below.
15. The angles of elevation from two points A and B to the top of a storey building are $48^0$ and $57^0$ respectively. If $AB = 50\text{ m}$ and the point A and B are opposite each other; Calculate:

a) the distance of point A to the building 

b) the height of the building
