## MOLE CONCEPT

## INSTRUCTIONS TO CANDIDATES

Answer ALL questions in this paper in the spaces provided.

1. Zinc metal and hydrochloric acid react according to the following equation

$$
\mathrm{Zn}_{(\mathrm{s})}+2 \mathrm{HCl}_{(\mathrm{aq})} \longrightarrow \mathrm{ZnCl}_{(\mathrm{aq})}+\mathrm{H}_{2(\mathrm{~g})}
$$

1.96 g of zinc were reacted with $100 \mathrm{~cm}^{3}$ of 0.2 M Hydrochloric acid,
(a) Determine the reagent that was in excess
(b) Calculate the total volume of hydrogen gas that was liberated at S.T.P conditions $(\mathrm{Zn}=65.4$, molar gas volume $=22.4$ litres at S.T.P $)$
(2mks)
2. Calculate the mass of nitrogen (IV) oxide gas that would occupy the same volume as 10 g of hydrogen gas at the same temperature and pressure. ( $\mathrm{H}=1.0, \mathrm{~N}=14.0, \mathrm{O}=16.0$ )
(2mks)
3. Urea, $\left(\mathrm{NH}_{2}\right)_{2} \mathrm{CO}$ is prepared by the reaction between ammonia and carbon(IV) oxide

$$
2 \mathrm{NH}_{3(\mathrm{~g})}+\mathrm{CO}_{2(\mathrm{~g})} \longrightarrow\left(\mathrm{NH}_{2}\right)_{2} \mathrm{CO}_{(\mathrm{aq})}+\mathrm{H}_{2} \mathrm{O}_{(\mathrm{l})}
$$

In one process, 340 kg of ammonia were reacted with excess carbon (IV) oxide.
Calculate the moles of urea that were formed. $(\mathrm{H}=1.0, \mathrm{C}=12.0, \mathrm{~N}=14.0, \mathrm{O}=16.0)$
4. In a filtration experiment $25 \mathrm{~cm}^{3}$ of solution of sodium hydroxide containing 8 g per litre was required for complete neutralization of 0.245 g of a dibasic acid. Calculate the relative molecular mass of the acid. $(\mathrm{Na}=23.0, \mathrm{O}=16, \mathrm{H}=1)$
$5.12 .0 \mathrm{~cm}^{3}$ of methane and $48 \mathrm{~cm}^{3}$ of oxygen were exploded together. The final volume measured under the original conditions was $36.0 \mathrm{~cm}^{3}$ neglecting the water formed. $24.0 \mathrm{~cm}^{3}$ of this was unused oxygen. Show the ratio of reacting volume of the gases referred to and gaseous products formed.
(2marks)
6. 4.9 g a tribasic acid was dissolved in water and the solution made up to $500 \mathrm{~cm}^{3}$. If the concentration of the hydrogen ions in the solution is 0.3 M , calculate the relative molecular mass of the acid.
7. The mass of $1 \mathrm{dm}^{3}$ of gas $\mathbf{X}$ at room temperature and pressure is 2.667 g . Determine the relative molecular mass of the gas (molar gas volume at r.t.p $=24 \mathrm{dm}^{3}$ ).
8. A solution was made by dissolving 7.5 g of sodium hydroxide containing inert impurities in water and making it to $250 \mathrm{~cm}^{3}$ of solution. If $20 \mathrm{~cm}^{3}$ of this solution is neutralized exactly by $13 \mathrm{~cm}^{3}$ of 1 M hydrochloric acid, calculate the percentage purity of sodium hydroxide.

$$
(\mathrm{Na}=23 ; \mathrm{O}=16 ; \mathrm{H}=1)
$$

9. a) An oxide of nitrogen contains $30.4 \%$ nitrogen. Its density at s.t.p is $4.11 \mathrm{~g} / \mathrm{dm}^{3}$.

Determine the molecular formula of the compound.

$$
\left(\mathrm{N}=14 ; \mathrm{O}=16 ; \text { moles gas volume }=22.4 \mathrm{dm}^{3}\right)
$$

b) Magnesium ribbon was burnt in a gas jar of nitrogen. A few drops of water were added to the solid formed in the jar. Write an equation for the second reaction.

```
    (1mk)
```

10. In a experiment, 10.6 g of a mixture of Anhydrous Sodium Carbonate and Sodium Chloride were dissolved in water to make $100 \mathrm{~cm}^{3}$ of a solution required $20.0 \mathrm{~cm}^{3}$ of 0.5 M Hydrochloric acid solution for complete neutralization. What is the mass of Sodium Carbonate in the mixture?
$(\mathrm{Na}=23.0, \mathrm{C}=12.0, \mathrm{O}=16.0, \mathrm{Cl}=35.5)$
(3mks)
11. For the reaction

$$
\mathrm{Na}_{2} \mathrm{SO}_{3(\mathrm{~s})} \quad+2 \mathrm{HCl}_{(\mathrm{aq})} \longrightarrow 2 \mathrm{NaCl}_{(\mathrm{aq})}+\mathrm{SO}_{2(\mathrm{~g})}+\mathrm{H}_{2} \mathrm{O}_{(\mathrm{l})}
$$

Given that 25.2 g of $\mathrm{Na}_{2} \mathrm{SO}_{3}$ were made to react with $700 \mathrm{~cm}^{3}$ of 0.5 M HCl , which reagent was in excess?
12. 9.42 g of an organic acid RCOOH is dissolved in $600 \mathrm{~cm}^{3} .25 .0 \mathrm{~cm}^{3}$ of this solution was found to require of 0.207 M potassium hydroxide solution for complete neutralization. ( $\mathrm{C}=12.0, \quad \mathrm{O}=16.0, \quad \mathrm{H}=1.0$ )
i) Determine the formula mass of the acid
ii) Hence the value of $R$
13. $25.0 \mathrm{~cm}^{3}$ of 0.12 M potassium hydroxide solution required $30.0 \mathrm{~cm}^{3}$ of a solution of a dibasic acid $\left(\mathrm{H}_{2} \mathrm{Y}\right)$ for complete neutralization. The acid contained 3.15 g per $500 \mathrm{~cm}^{3}$ solution. Calculate:
(a) The molarity of the acid solution ( $1^{1 ⁄ 2 \mathrm{mks})}$
(b) The relative formula mass of the acid.
( $1^{1 / 2 m k s}$ )
14. Zinc Sulphate can be used as a dietary supplement in cases of suspected zinc deficiency. The compound crystallizes as anhydrated salt and is readily water soluble.
(b) In a simple experiment to determine the extent of hydration, a technician carefully heated 3.715 g of crystals to a moderate temperature until no further loss in mass occurred. The anhydrous zinc had a mass of 2.08 g .
(i) How many moles of zinc are there in 2.08 g of anhydrous zinc Sulphate? ( $\mathbf{Z n}$ $=65, \mathrm{O}=16, \mathrm{~S}=32, \mathrm{H}=1$ ) (2mks)
(ii) How many moles of water were lost?
(iii) Determine the value of n in the formula $\mathrm{ZnSO}_{4} \cdot \mathrm{nH} 2 \mathrm{O}$.
(c) The daily intake of zinc in Kenya is 15 mg per adult person.
(i) What mass of zinc Sulphate crystals would need to be taken to obtain this intake? ( 2 mks )
(ii) If this is taken via a 5 ml dose of aqueous zinc Sulphate, calculate the concentration of this solution in molcm ${ }^{-3}$ of the hydrated salt. ( 2 mks )
