## 1. The Trigometric Ratio 1

1. Given $\sin (90-a)=1 / 2$, find without using trigonometric tables the value of $\cos a$
2. If $\tan \theta=\frac{24}{45}$, find without using tables or calculator, the value of

$$
\begin{equation*}
\frac{\tan \theta-\cos \theta}{\cos \theta+\sin \theta} \tag{3marks}
\end{equation*}
$$

3. At point A, David observed the top of a tall building at an angle of $30^{\circ}$. After walking for 100meters towards the foot of the building he stopped at point $B$ where he observed it again at an angle of $60^{\circ}$. Find the height of the building
4. Find the value of $\theta$, given that $1 / 2 \sin \theta=0.35$ for $0^{\circ} \leq \theta \leq 360^{\circ}$
5. A man walks from point A towards the foot of a tall building 240 m away. After covering 180 m , he observes that the angle of elevation of the top of the building is $45^{\circ}$. Determine the angle of elevation of the top of the building from $\mathbf{A}$
6. The table below gives a field book showing the results of a survey of a section of a piece of land between A and E. All measurements are in metres.

|  | E |  |
| :--- | :--- | :--- |
| D33 | 95 | F 36 |
|  | 90 |  |
| C21 | 70 | G 25 |
| B 42 | 30 | H 40 |
|  | 25 | A |

(a) Draw a sketch of the land.
(b) Calculate the area of this piece of land.
7. Solve for x in $2 \operatorname{Cos} 2 \mathrm{x}^{0}=0.60000^{0} \leq \mathrm{x} \leq 360^{0}$.
8. Wangechi whose eye level is 182 cm tall observed the angle of elevation to the top of her house to be $32^{\circ}$ from her eye level at point A . she walks 20 m towards the house on a straight line to a point B at which point she observes the angle of elevation to the top of the building to the $40^{\circ}$. Calculate, correct to 2 decimal places the ;
a)distance of A from the house
b) The height of the house
9. Given that $\cos \mathrm{A}=5 / 13$ and angle A is acute, find the value of:-
$2 \tan \mathrm{~A}+3 \sin \mathrm{~A}$
10. Given that $\tan 5^{\circ}=3+5$, without using tables or a calculator, determine $\tan 25^{\circ}$, leaving your answer in the form $a+b \sqrt{c}$
11. A student whose eye level is 182 cm from the ground observed the top of their house at an angle of elevation of $32^{\circ}$ at point $\mathbf{A}$. She walked for 20 m towards the house along a straight road to a point $\mathbf{B}$, where she observed the top of the building again at an angle of elevation of $40^{\circ}$. Calculate correct to 2 decimal places the:-
(a) Distance of $\mathbf{A}$ from the house
(b) The height of the house
12. Given that $\tan \mathbf{x}=\underline{5}$, find the value of the following without using mathematical tables or calculator: 12
(a) $\operatorname{Cos} x$
(b) $\operatorname{Sin}^{2}(90-x)$
13. If $\tan \theta={ }^{8} / 15$, find the value of $\underline{\boldsymbol{\operatorname { S i n }} \boldsymbol{\theta}-\boldsymbol{\operatorname { C o s } \theta} \text { without using a calculator or table }}$ $\operatorname{Cos} \boldsymbol{\theta}+\boldsymbol{\operatorname { S i n }} \boldsymbol{\theta}$
