## 1. Volume of solids

1. Metal cube of side 4.4 cm was melted and the molten material used to make a sphere. Find to 3 significant figures the radius of the sphere $\left(\right.$ take $\left.\Pi=\frac{22}{7}\right) \quad(3 \mathrm{mks})$
2. Two metal spheres of diameter 2.3 cm and 3.86 cm are melted. The molten material is used to cast equal cylindrical slabs of radius 8 mm and length 70 mm .

If $1 / 20$ of the metal is lost during casting. Calculate the number of complete slabs casted. ( 4 mks )
3. The volume of a rectangular tank is $256 \mathrm{~cm}^{3}$. The dimensions are as in the figure.

Find the value of x
(3 marks)
4.

The diagram represent a solid frustum with base radius 21 cm and top radius 14 cm . The frustum is 22.5 cm high and is made of a metal whose density is $3 \mathrm{~g} / \mathrm{cm} 3 \quad \pi=22 / 7$.
a) Calculate
(i) the volume of the metal in the frustrum.
(5 marks)
(ii) the mass of the frustrum in kg .
(2 marks)
b) The frustrum is melted down and recast into a solid cube. In the process $20 \%$ of the metal is lost. Calculate to 2 decimal places the length of each side of the cube.
(3 marks)
5. The figure below shows a frustrum

Find the volume of the frustrum
6. The formula for finding the volume of a sphere is given by $V=\frac{4}{3} \pi r^{3}$. Given that $\mathrm{V}=311$ and $\pi=3.142$, find r .
`(3 mks)
7. A right conical frustrum of base radius 7 cm and top radius 3.5 cm , and height of 6 cm is stuck onto a cylinder of base radius 7 cm and height 5 cm which is further attached to a hemisphere to form a closed solid as shown below

Find:
(a) The volume of the solid
(b) The surface area of the solid
8. A lampshade is made by cutting off the top part of a square-based pyramid VABCD as shown in the figure below. The base and the top of the lampshade have sides of length 1.8 m and 1.2 m respectively. The height of the lampshade is 2 m

Calculate
a) The volume of the lampshade
b) The total surface area of the slant surfaces
c) The angle at which the face BCGF makes with the base ABCD.
9. A solid right pyramid has a rectangular base 10 cm by 8 cm and slanting edge 16 cm . calculate:
(a) The vertical height
(b) The total surface area
(c) The volume of the pyramid
10. A solid cylinder of radius 6 cm and height 12 cm is melted and cast into spherical balls of radius 3 cm . Find the number of balls made
11. The sides of a rectangular water tank are in the ratio $1: 2: 3$. If the volume of the tank is $1024 \mathrm{~cm}^{3}$. Find the dimensions of the tank. (4s.f)
12. The figure below represents sector OAC and OBD with radius OA and OB respectively. Given that OB is twice OA and angle $\mathrm{AOC}=60^{\circ}$. Calculate the area of the shaded region in $\mathrm{m}^{2}$, given that $\mathrm{OA}=12 \mathrm{~cm}$

13. The figure below shows a closed water tank comprising of a hemispherical part surmounted on top of a cylindrical part. The two parts have the same diameter of 2.8 cm and the cylindrical part is 1.4 m high as shown:-
(a) Taking $\pi=\frac{22}{7}$, calculate:

(i) The total surface area of the tank
(ii) the cost of painting the tank at shs .75 per square metre
(iii) The capacity of the tank in litres
(b) Starting with the full tank, a family uses water from this tank at the rate of 185 litres/day for the first 2days. After that the family uses water at the rate of 200 liters per day. Assuming that no more water is added, determine how many days it takes the family to use all the water from the tank since the first day
14. The figure below represents a frustrum of a right pyramid on a square base. The vertical height of the frustrum is 3 cm . Given that $\mathrm{EF}=\mathrm{FG}=6 \mathrm{~cm} \underset{\mathrm{E}}{\text { and }}$ that $\mathrm{AB}=\underset{\mathrm{H}}{\mathrm{BC}_{H}}=9 \mathrm{~cm}$

Calculate;
a) The vertical height of the pyramid.
b) The surface area of the frustrum.
c) Volume of the frustrum.

d) The angle which line AE makes with the base ABCD.
15. A metal hemisphere of radius 12 cm is melted done and recast ${ }_{i}^{B}$ nto the shape of a cone of base radius 6 cm . Find the perpendicular height of the cone
16. A solid consists of three discs each of $11 / 2 \mathrm{~cm}$ thick with diameter of $4 \mathrm{~cm}, 6 \mathrm{~cm}$ and 8 cm respectively. A central hole 2 cm in diameter is drilled out as shown below. If the density of material used is $2.8 \mathrm{~g} / \mathrm{cm}^{3}$, calculate its mass to 1 decimal place

17. A right conical frustrum of base radius 7 cm and top radius 3.5 cm and height 6 cm is stuck onto a cylinder of base radius 7 cm and height 5 cm which is further attached to form a closed solid as shown below.

Find;

18. The figure below shows a frustrum

Find the volume of the frustrum
19. The diagram below shows a metal solid consisting of a cone mounted on hemisphere.

The height of the cone is $11 / 2$ times its radius;

Given that the volume of the solid is $31.5 \pi \mathrm{~cm}^{3}$, find:
(a) The radius of the cone
(b) The surface area of the solid
(c) How much water will rise if the solid is immersed totally in a cylindrical container which contains some water, given the radius of the cylinder is 4 cm
(d) The density, in $\mathrm{kg} / \mathrm{m}^{3}$ of the solid given that the mass of the solid is 144 gm
20. A solid metal sphere of volume $1280 \mathrm{~cm}^{3}$ is melted down and recast into 20 equal solid cubes. Find the length of the side of each cube.
21. The figure below shows a frustrum cut from a cone

Calculate the volume of the frustrum
