## GENERAL MATHEMATICS FORMULAE

## Length

The units of length that are used include the following:

- millimetre (mm)
- centimetre (cm)
- decimetre (dm)
- Metre (m)
- Dekametre (Dm)
- Hectometre (Hm)
- Kilometre (Km)

From the illustration:

- $10 \mathrm{~mm}=1 \mathrm{~cm}$
- $10 \mathrm{~cm}=1 \mathrm{dm}$
- $10 \mathrm{dm}=1 \mathrm{~m}$
- $10 \mathrm{~m}=1 \mathrm{Dm}$
- $10 \mathrm{Dm}=1 \mathrm{Hm}$
- $10 \mathrm{Hm}=1 \mathrm{Km}$

The relationship between the units of lengths may be clearly seen if the units are written with a 10 between them.

So to find how many small units are equivalent to another, multiply the number of tens between the units, hence:

- Km 1
- Hm 10
- Dm 100
- M 1000
- dm 10000
- cm 100000
- mm 1000000

By the end of this unit, the learner should be able to:
a) Construct triangles,
b) Construct circles touching the three sides of a triangle.
c) Work out problems using Pythagorean Theorem,
d) Construct of parallelogram and rhombuses,
e) Work out problems involving properties of square, rectangles, parallelograms, rhombuses and trapeziums and angles on straight lines,
f) Recognize and identify triangular and square based pyramids and
g) Identify nets of pyramids and prisms.

## Worked Exercise

1. Find the value of x in the following.

## Working

$\mathrm{X}+45+50=180^{\circ}$ (Angles on a straight lines are supplementary i.e. add up to $180^{\circ}$ ) $\mathrm{X}+95=180^{\circ}$ $\mathrm{X}=85^{0}$

The value of $\underline{\underline{x}=85^{0}}$
2. Find the sum of angle "a" and angle "b" in the figure below.

## Working

Lines AB and C D are transversals are Therefore $90+b=180^{\circ}$

Co-interior angles
supplementally
Therefore $\mathrm{b}=180-90$
$B=90^{\circ}$

Angle $\mathrm{a}=120^{\circ}$

- (Corresponding angles)

Therefore $\mathrm{a}=120^{\circ}$
Sum of $a$ and $b$

$$

$=6 x+30=180$
$6 x=180-30$
$6 x=150$
$\mathrm{X}=25$
Angle A B D $=x+4 X$
But $\mathrm{x}=25$
Therefore $25+(4 \times 25)$

$$

Angle $\mathrm{CDB}=$ angle EBD [Alternate triangle]
Therefore EBD $=56^{\circ}$
$\begin{aligned} & \left(\frac{180-56}{2}\right)^{0} \\ \text { Angle BDE } & =0_{0} \\ & =62\end{aligned}$
