**SUKELEMO PRE-MOCK**  
**MAY/ JUNE 2022 EXAMINATIONS**  
*Kenya Certificate of Secondary Education (S.E)*

**INSTRUCTIONS TO CANDIDATES**
1. Write your name, index number, class, date and signature in the spaces provided above.
2. This paper consists of two questions 1 and 2.
3. Answer all questions in the spaces provided.
4. Non-programmable calculators and mathematical tables may be used.
5. Show all your workings.

*This paper consists of 10 printed pages.  
Candidates should check the question paper to ensure that all pages are printed as indicated and no questions are missing*
QUESTION ONE

1. You are provided with the following.
   - A ammeter
   - A voltmeter
   - A wire mounted on a mm scale.
   - A switch.
   - A long wire with a crocodile clip at one end (crocodile clip to be used as a slider or jockey).
   - A new dry cell (size D) and a cell holder.
   - A micrometer screw gauge (may be shared).
   - 5 connecting wires, two with crocodile clips at the end.

Proceed as follows:

(a) Measure the diameter, d of the mounted at three different points.
   
   Average diameter \( d = 0.27 \pm 0.2 \text{ mm} \)  

(b) Set up the apparatus as shown in the circuit diagram in the figure below.

(c) Close the switch and tap the mounted wire with the crocodile clip as shown in the circuit. Ensure that both meters show positive deflection. Open the switch.

(d) Tap the wire at \( L = 20 \text{ cm} \). Close the switch read and record in the time provided the milliammeter and voltmeter reading.
(e) Repeat the procedure in (c) for other values of $L$, shown in the table below and complete the table.

Column $L$ - 1 MK
Column $V$ - 2 Correct - 1 MK
Column $I$ - 2 Correct - 1 MK
Column $R$ - 1 MK

(f) (i) Plot the graph of $R$ (Y-axis) against $L$ (m).
(iii) Given that $R = \frac{PL}{A}$ were $A$ is the cross-sectional area of the wire and $P$ is a constant for the material of the wire, determine the value of the constant $P$.

$$\text{Slope} = \frac{f}{A}$$

$$f = \text{Slope} \times A$$

$$f = 5.128 \times \left[(0.133 \times 10^{-3}) \times 22 \right]$$

$$f = 2.937 \times 10^{-7} \text{Nm}$$

**QUESTION TWO**

This question has two parts A and B. Answer all the parts

**PART A**

You are provided with the following:

- A metre rule
- Two masses labelled A and B
- 250 ml transparent plastic beaker
- Three pieces of thread, each 30cm long.
- Stand with clamps
- Tissue paper.
- Vernier calipers (to be shared)
- 200 ml of a liquid L
- Weighing balance (to be shared)
Proceed as follows:

a. Take mass A and measure the diameter d and height h using the Vernier calipers
   \[ d = 2.53 \times 10^{-2} \text{m} \]
   \[ h = 2.48 \times 10^{-2} \text{m} \]
   (1mark)

b. Determine the volume V given that \( V = \pi \left( \frac{d}{2} \right)^2 h \)
   \[ V = 1.246 \times 10^{-2} \text{m}^3 \]
   (1mark)

c. Using a stand and one piece of thread, suspend the metre rule in air such that it balances horizontally. Record the position of the centre of gravity (G)
   \[ G = \boxed{50.5} \text{ cm} \]
   (1mark)

   (NOTE: The metre rule should remain suspended at this point throughout the experiment.)

d. Set up the apparatus as shown in Figure 1 below;

![Figure 2]

- Suspend the mass A at a distance \( x = 30\text{cm} \) and completely immerse it in liquid L without touching the sides of the beaker.

- Hang mass B and adjust its position such that the rule is balanced and measure the distance \( d \text{ cm} \).
g. Tabulate your results in table 1 below;

<table>
<thead>
<tr>
<th>x (cm)</th>
<th>30</th>
<th>35</th>
<th>40</th>
</tr>
</thead>
<tbody>
<tr>
<td>d (cm)</td>
<td>26.2</td>
<td>30.8</td>
<td>35.0</td>
</tr>
<tr>
<td>d/x</td>
<td>0.8733</td>
<td>0.8800</td>
<td>0.8750</td>
</tr>
</tbody>
</table>

(2marks)

h. Determine the weight of mass B in air. Given that

\[ g = 10 \text{ N/Kg} \]

Weight in air = 1.0N

(1mark)

i. Using the principle of moments; determine the apparent weight P of mass A when completely immersed in liquid L.

\[ F_1 d_1 = F_2 d_2 \]

Apparent weight \( P = 0.8733 \text{N} \)

\[ A \times 30.0 = 1 \times 26.2 \]

\[ A = \frac{1 \times 26.2}{30.0} = 0.8733 \text{N} \]

(2marks)

j. Find the upthrust, \( U \) on mass A when completely immersed.

\[ U = R - A \]

\[ U = 1N - 0.8733 \text{N} = 0.1267 \text{N} \]

(1mark)

k. Determine the density of liquid L, given that;

\[ \rho = \frac{Un}{V} \text{ where } n = 0.1 \text{Kg/N} \]

\[ \rho = \frac{0.1267 \text{N} \times 0.1}{1.246 \times 10^{-5}} = 1016.85 \text{ Kg/m}^3 \]

(1mark)

Substitution -1 mark

Answer = 1016.85 kg/m³

With a must
PART B

You are provided with the following
- A rectangular glass block
- Four optical pins
- A piece of soft board
- A plain sheet of paper
- 4 thumb pins

Proceed as follows:

(a) Place the plain sheet of paper on the soft board and fix it using the thumb pins provided.
Place the glass block at the centre of the sheet and draw its outline. Remove the glass block.

(b) Draw a normal at a point 2cm from the end of the longer side of the block outline. This normal line will be used for the rest of the experiment. Draw a line at an angle of angle $\phi=25^\circ$ from the normal. Stick two pins $p_1$ and $p_2$ vertically on this line.

(c) By viewing through the glass from the opposite side, stick two other pins $p_3$ and $p_4$ vertically such that they are in line with the images of the first two pins. Draw a line through the marks made by $p_3$ and $p_4$ to touch the outline. Extend the line $p_1p_2$ through the outline (dotted line). Measure
and record in the table the perpendicular distance $d$ between the extended line and the line $p_3$ and $p_4$ Record this value in the table.

(d) Repeat the procedure in (g) and (h) for other values of $\theta$ shown in the table. (3 marks)

<table>
<thead>
<tr>
<th>$\theta$ (deg)</th>
<th>25</th>
<th>35</th>
<th>40</th>
<th>45</th>
<th>55</th>
<th>60</th>
<th>65</th>
</tr>
</thead>
<tbody>
<tr>
<td>$d$ (cm)</td>
<td>1.0</td>
<td>1.3</td>
<td>1.8</td>
<td>2.0</td>
<td>2.6</td>
<td>3.1</td>
<td>3.8</td>
</tr>
</tbody>
</table>

(e) Plot a graph of $d$ against $\theta$ (5 marks)

(f) Use the graph to estimate the value of $d$ when $\theta = 0$ (1 mark)

$$d = -0.4 \text{ cm}$$

Award a mark if $d = 0$
